- 4/28** Jeffrey Blais, 34, Manchester, received a summons for drive after revocation/suspension- subsequent.

ABOUT MOTHERS

May 9th was Mother's Day. I am sure you remembered; if not, you were reminded! This is not a holiday you should forget. In the US this day to honor mothers began with Anna Jarvis in 1908. She persisted in trying to have the day be nationally recognized, and in 1914 President Woodrow Wilson officially established the second Sunday in May as Mother's Day. During her life Anna Jarvis spoke and campaigned against the commercialization of Mother's Day.

So why talk about Mother's Day in a medical column? Each of us had a mother, the woman who birthed us. For 9 months the 'next generation' is growing in the most amazing environment; attached to the mother by means of a placenta (which starts to develop shortly after the egg is fertilized) through which nutrients and oxygen pass to the infant and waste products are passed to the mother for disposal.

The placenta has a 12 square meter surface area where the maternal and fetal bloods exchange their nutrients and waste, yet the two blood systems rarely ever meet. The placenta is basically a fetal organ, allowing the infant to live off of its mother. We need to remember that although the baby and placenta are 'in' the mother's body, they are not part of the mother's body. They are genetically separate, and both leave the mother at birth.

The practice of gynecology was described as early as 1800 BC in the Kahun Papyrus. Soranus, a Roman physician living in Ephesus, wrote about the practice of gynecology in the early first century AD.

A major breakthrough in the care of the pregnant woman came with the work of Ignaz Semmelweis. In the 1800s he demonstrated that hand washing was key to reducing the death of mothers from puerperal fever. You guessed it, many thought that this was foolish and did not see the need to wash their hands, and certainly no one was going to tell them what they could or couldn't do... have you heard similar attitudes during our current pandemic? We don't seem to learn from history.

In the 19th Century many different techniques and forceps were developed to deliver the baby who for a variety of reasons was not going to be delivered naturally. Caesarean section became more available, and with improvements in obstetrical anesthesia deliveries have been safer. In the second half of the 20th Century fetal monitoring became the norm and greatly improved the chance for having a live birth.

Midwives have always been at the forefront of the development of obstetrical care, and only in the 20th century did the term obstetrics replace the term midwifery as the way to describe the subject taught in medical school.

According to the CDC, in the US, 700 women die from pregnancy-related complications each year. 1/3 of those deaths occur 1 week to 1 year after delivery. Black and Native American women are 3 times more likely to die from pregnancy-related causes as White women. Heart disease and stroke are the leading cause of pregnancy-related deaths. <https://www.cdc.gov/vitalsigns/maternal-deaths/index.html>.

Let us be thankful for the woman who carried and nourished us for 9 months, risked her life to birth us, and then sacrificed much, so we could succeed. Thank you Mom.
